Lab experiment - Working with the memory vulnerabilities – Part II

Task

- **Download Vulln.zip from teams.**
- **Deploy a virtual windows 7 instance and copy the Vulln.zip into it.**
- **Unzip the zip file. You will find two files named exploit.py and Vuln_Program_Stream.exe**
- **Download and install python 2.7.* or 3.5.***
- **Run the exploit script II (exploit2.py- check today's folder) to generate the payload.**
    - **Replace the shellcode in the exploit2.py**
- **Install Vuln_Program_Stream.exe and Run the same**

Analysis

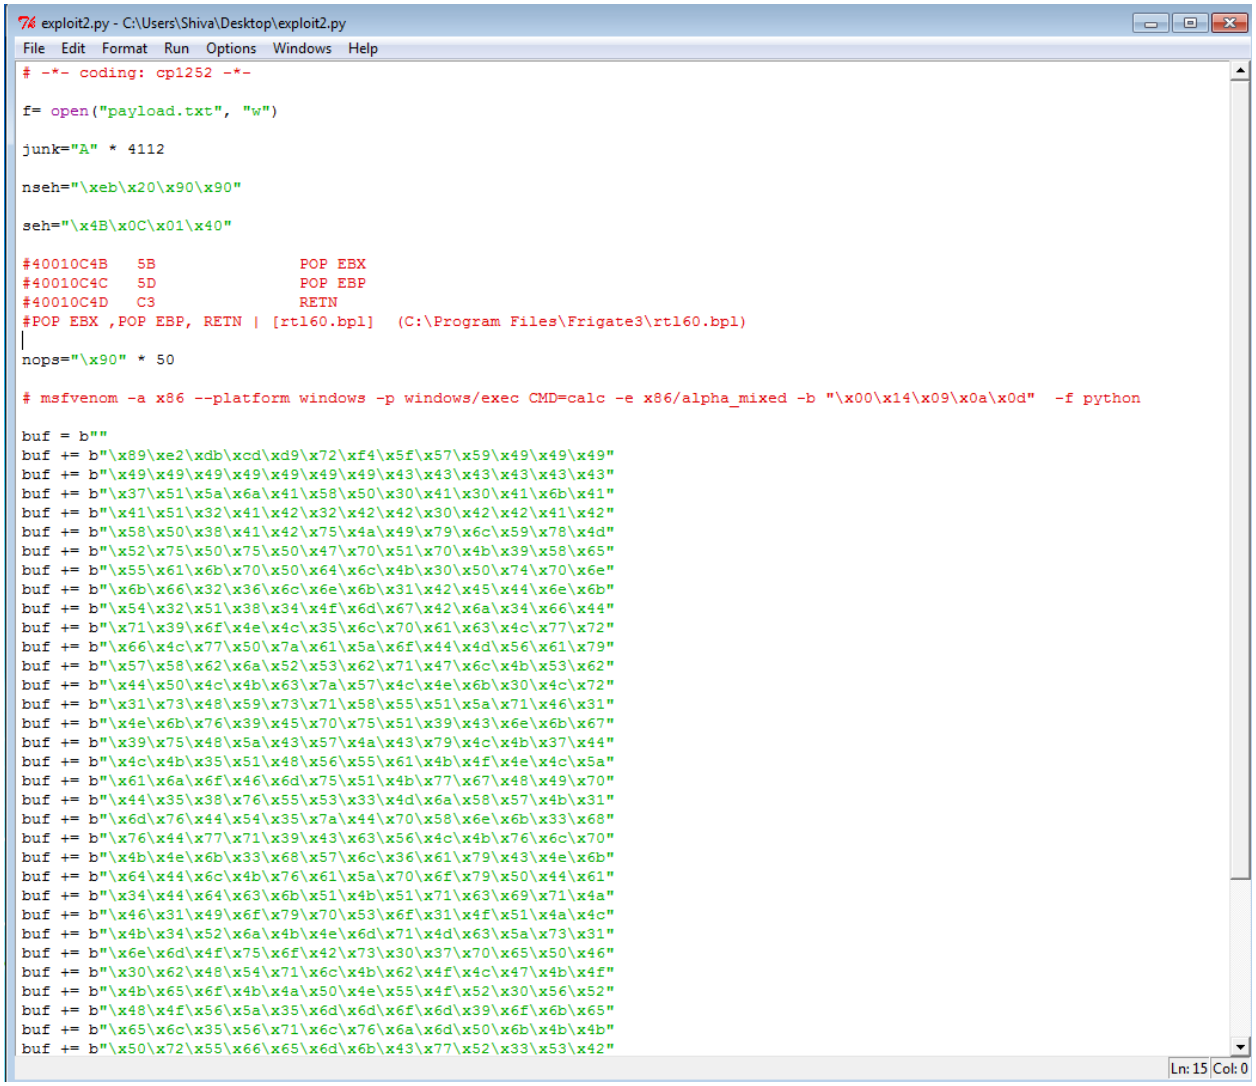
- **Try to crash the Vuln_Program_Stream program and exploit it.**
- **Change the default trigger from cmd.exe to calc.exe (Use msfvenom in Kali linux).**

Example:

msfvenom -a x86 --platform windows -p windows/exec CMD=calc -e x86/alpha_mixed -b "\x00\x14\x09\x0a\x0d" -f python

- **Change the default trigger to open control panel.**

1) **Try to crash the Vuln_Program_Stream Program and exploit it.**



exploit2.py - C:\Users\Shiva\Desktop\exploit2.py

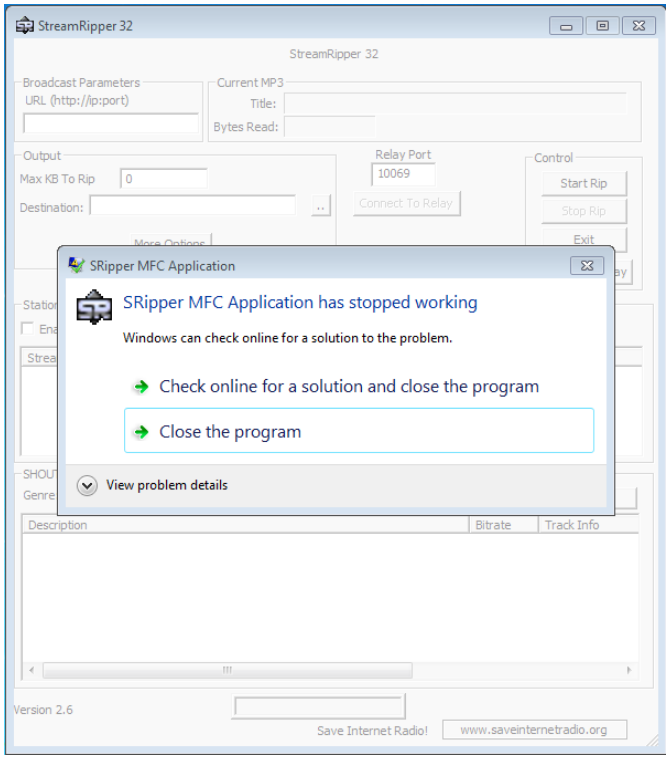
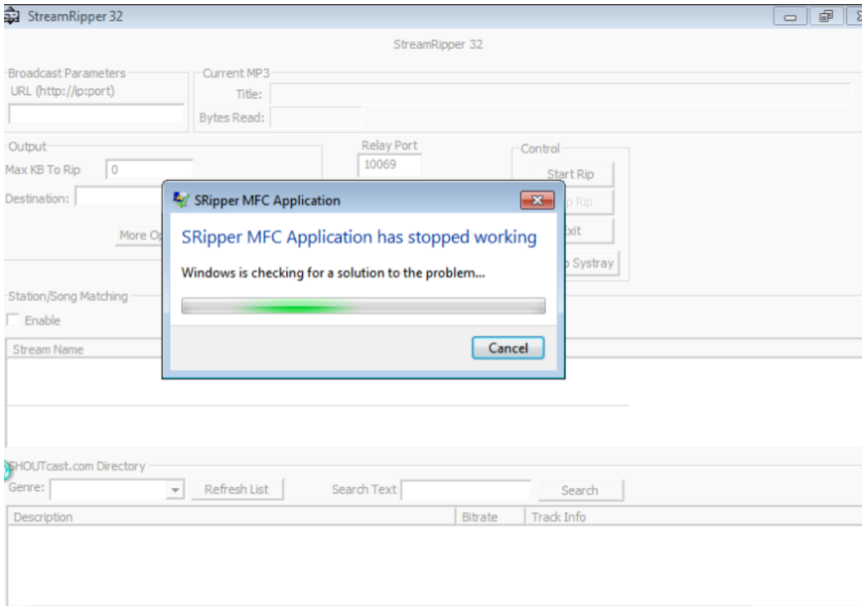
Click on the Add button in Station/Song Matching section and paste the Output there in Song pattern.





2) Change the default trigger from cmd.exe to calc.exe (Use msfvenom in Kali linux).

Required Trigger: msfvenom -a x86 --platform windows -p windows/exec CMD=calc -e x86/alpha_mixed -b “\x00\x14\x09\x0a\x0d” -f python

Change trigger in the kali linux terminal to give a shellcode to trigger calculator,i.e. Exploiting.
